For adding Product variants in colors- > give them a master to select from and an option to add new color if applicable

Also there should be an option where they fill the details for one color variant - > give an checkbox to auto fill the same quantity n price for the remaining colors to be added.

No edit quantity in Stock

For Gray -> Factory -> Design Stock

1. For gray stock they would be selecting it from product drop down, & add stock quantity in variant, add agent, factory etc.
2. For Factory stock -> We'll select stock from the gray stock inventory only -> and send it in different stages of processing -> so the fields would be: Select product (from present gray stock inventory), factory, processing stage, meters ()

Once the material comes out of factory -> we give them an option to send to warehouse button -> over each entry of factory stock, so once clicked on this button, we can reduce the amt of fabric which is being processed in the factory

3. For design stock-> it remains the same, but price we will no edit in stock module
4. Adjustment module is not working

Track and manage customer orders

Total Orders 5 All time	Pending 1 Need attention	Processing 2 In progress	Delivered 1 Completed	Total Value ₹224,000 All orders
---	--	--	---	---

Search orders, customers, products... All Status All Customers

For orders module -> we only have 2 status -> Pending, confirmed

If a particular type of user punches the order, we'll set it to pending, and the admin user and view it and click on reject / accept order button to confirm the order
Till then the stock wouldnt be updated
